1 Introduction

This document explains how to connect to the B2B interface for the CIS Cash system in the **PRODUCTION** environment.

Note that this document only applies to the **PRODUCTION** environment, for the TESTING/QA environment a different document is available.

2 Requesting access

To use the CIS Cash B2B interface in the PRODUCTION environment, a formal request should be made via the AFIS Helpdesk.
The supported authentication and authorization protocol is ***OAuth2 with Client Credentials grant type***.

Your request must contain the following information:

- a statement that you are requesting access to the CIS Cash B2B interface
- details (email address) of a single point of contact that we can communicate with in case of issues with the B2B interface. By preference this should be a functional mailbox.
- the name of the URT organization for which the CIS Cash declarations created via the B2B interface will be created "on behalf of".

Upon approval of the access request, you will receive a client_id that must be used to connect to the PRODUCTION environment. You will need to generate an RSA public/private key pair with 2048-bit modulus and communicate to OLAF your public key. The client_id together with the private key must be used to access the PRODUCTION environment.

To more easily troubleshoot technical issues, the technical contact person responsible for the B2B connectivity should communicate to OLAF the IP address range that will be used to connect to the PRODUCTION environment.

IMPORTANT: positive results of tests performed in TESTING/QA environment (successful connection to the environment, proper creation of a valid cash declaration), confirmed by OLAF, are required to obtain access to the PRODUCTION environment.

3 B2B Technical documentation

All the necessary technical documentation can be downloaded from the AFIS Library. For that, you will need access to the AFIS portal (https://afis.olaf.europa.eu). If you do not have access to the AFIS Library, please contact your national Liaison Officer.

The technical documentation is available at "***AFIS Technical Specifications > CIS-CASH"*** folder. There you will find a zip file containing all the necessary documentation.

4 Accessing the B2B interface

The endpoint URLs of the PRODUCTION environment are:

Create a declaration using the openAPI:
https://api.olaf.europa.eu/api/cashdeclarations

Obtain access token:
https://identity.olaf.europa.eu/sso/oauth2/afis/access_token

NB: For compatibility reason, already on-boarded clients can still use OAuth2 via the following URLs:

Create a declaration:
https://afis-b2b.olaf.europa.eu/api/cashdeclarations or
https://afis-b2b.olaf.europa.eu/afis/api/v1/cashdeclaration

Obtain access token
https://afis-b2b.olaf.europa.eu/sso/oauth2/afis/access_token

5 Support

For any questions or issues related to accessing CIS Cash B2B in the PRODUCTION environment, please contact the AFIS Helpdesk.

The AFIS Helpdesk is available from 08:30 – 18:30 Brussels time, Monday to Friday except 1st of January and 25th of December.

Contact details:

Telephone	+32 2 296 27 27
E-mail	OLAF-AFIS-IT-HELP-DESK@ec.europa.eu
AFIS-Mail	EC-OLAF-IT

Please note that the functional mailbox OLAF-FMB-CIS@ec.europa.eu used to contact OLAF during TESTING/QA phase must NOT be used for any issues related to the PRODUCTION environment.
