1 Introduction

This document explains how to connect to the B2B interface for the CIS Cash system in the **TESTING(QA)** environment. The primary usage will be to test and validate the submission of a cash declaration. This TESTING(QA) environment replaces the previously used PILOT environment.

Please note that this document only applies to the TESTING(QA) environment, for the PRODUCTION environment a different document is available.

WARNING: The CIS B2B Testing(QA) environment must NOT be used to store production data. It is made available only for testing purposes and should therefore contain only test data.
As this is a testing environment, data may also be reset or removed as part of maintenance, testing or operational activities.

2 Access Request

There is no formal request procedure to obtain access to the TESTING(QA) environment.

The supported authentication and authorization protocol is ***OAuth2 with Client Credentials grant type***.

The technical contact persons for B2B in the member state will receive a client_id and is requested to generate an RSA public/private key pair with 2048-bit modulus and share the public key with OLAF.
These must be used to access the TESTING(QA) environment.

To more easily troubleshoot technical issues, the technical contact person responsible for the B2B connectivity should communicate to OLAF the IP address range that will be used to connect to the TESTING(QA) environment.

3 B2B Technical documentation

All the necessary technical documentation to establish connectivity to the B2B interface can be downloaded from the AFIS Library. For that, you will need access to the AFIS Portal (https://afis.olaf.europa.eu). If you do not have access to the AFIS Library, please contact your national Liaison Officer.

The technical documentation is available at "***AFIS Technical Specifications > CIS-CASH***" folder. There you will find a zip file containing all the necessary documentation.

4 Accessing the B2B interface

The endpoint URLs of the TESTING(QA) environment are:

Create a declaration using the openAPI with Oauth2 without DPoP:
https://api-qa02.olaf.europa.eu/api/cashdeclarations
Obtain access token:
https://identity-qa.olaf.europa.eu/sso/oauth2/qa02/access_token

NB: Already on-boarded clients can still use OAuth2 via the following URLs:
Create a declaration:
https://sta91-b2b.olaf.europa.eu/api/cashdeclarations or
https://sta91-b2b.olaf.europa.eu/afis/api/v1/cashdeclaration

Obtain access token:
https://sta91-b2b.olaf.europa.eu/sso/oauth2/sta91/access_token.

5 Support

For any questions or issues related to accessing the TESTING(QA) environment, please use the functional mailbox OLAF-FMB-CIS@ec.europa.eu . Any issues related to accessing the PRODUCTION environment should be made to the AFIS Helpdesk directly.

The AFIS Helpdesk is available from 08:30 – 18:30 Brussels time, Monday to Friday except 1st of January and 25th of December.
